The wheel well is the area where the components. These independently in a fashion that results in the creation of lift.

George Cayley developed an efficient cambered airfoil in the early 1800s, as well as the concept of the wing. When pressure is introduced through an opening on one side of the disk, the entire disk expands. Flight control position, cabin environmental systems, electrical power, and auxiliary power units (APUs) for example, are all monitored and controlled from the cockpit via the use of instruments systems.

Tapered core honeycomb panels are frequently used as flight control surfaces. How do they account for the weight of the control surfaces?
