North American Paleontological Convention : p. Dating the Late Cretaceous vertebrate localities of southern France has been, and still is, a major problem Buffetaut and Le Loeuff The latest interpretation of the Austrian ornithopod is related to the discovery and description of similar Hungarian rhabdodontid material, for which the genus name Mochlodon was resurrected with two valid species: Mochlodon suessi for the Austrian fossils Fig.

Turtle fossils are one of the dominant elements in the Late Cretaceous vertebrate fauna. Christoph Roelf This contribution focuses on the attempted theft of dinosaur skeletons during the German occupation of Belgium in – and addresses some other cases of looting cultural possessions of natural historic value in modern European history. Wealden iguanodontian taxonomy in England has also begun to be scrutinized more thoroughly. However, the Bernissart skeleton changed all. Australia's Polar Early Cretaceous fossils only are all known genera restricted to small parts of Europe

even within the Ibero-Armorican landmass different higher-level groups are present in different areas e.
